

# REVIEW OF THE OECD SECURITY GUIDELINES

Jane Hamilton, Chair  
Working Party on Security & Privacy in the Digital Economy  
Industry Canada

# Organisation for Economic Co-operation and Development

---

- **Inter-governmental**
- **Economic co-operation and development**
- **Policy focused**
- **Policy standard setter**
- **Multi-stakeholder**

# Why is the OECD working on « information security »?

---

- **Long story: 1970s => 2014 (and onward)**
  - **Information communications technologies (ICTs) and economic and social development**
  - **Trust & ICTs**
    - **Trust is essential for ICTs to realize their full economic & social potential (security, privacy).**
- **Review of the 2002 Security Guidelines**

**How does OECD understand  
« information security »?**

---

**3 paradigm shifts**

# Environmental Context

- The environment switched from closed by default to open by default
- Driving huge economic & social benefits
- 1992 OECD Security Guidelines:

# Security Paradigm Shift #1

- What does « security » mean in this open environment?

# Security Paradigm Shift #2

## The Security Problem

---

- **Security controls are all about closing, limiting, reducing**
  - Although, we need them,
  - They limit information flows
  - They reduce opportunities for change, innovation and development
- **Absolute security cannot be achieved**
  - Security controls should not aim at achieving it
  - Too expensive even if we tried
  - Security for security does not work
  - And is not compatible with economic development.

# Security Paradigm Shift #3

## The Solution: security risk management

---

- Security controls should fully serve economic development
- From IT security to business risk management
  - Framework for business decisions to take digital security risk into account
  - Rather than assume that technology will eliminate the risk.

- Need for a clear and strong policy message.

# Digital environment in 2013

2013

**Hyper-connected &  
essential for the  
economy & society**

**Global  
Ecosystem**

2002

**Inter-connected &  
useful for all participants**

**Information  
Systems &  
Networks**

1992

**Un-connected (siloes) &  
practical for isolated users**

**Information  
Systems**

# New Generation of Government Policy

- **Comparative analysis of « National cybersecurity Strategies » (Dec 2012)**
- **Turning point**
  - Higher priority, leadership
  - Holistic, inclusive

# Main challenges

---

- **Mindset / Culture / Awareness**
- **Government coordination**
- **Regulatory model**
  - Flexible approach
  - Public-private co-operation
- **Other issues:**
  - Fundamental values
  - Skills
  - International cooperation
  - Critical information infrastructures

# Towards revised OECD Guidelines

---

- **Target audience:**
  - CEOs, government policy makers
  - OECD members & non-members
- **Our ambition:**
  - **Strong and clear messages about:**
    - Economic and social prosperity
    - Trust in an open, interconnected and global digital environment
    - Capacity to innovate, to develop and change
    - International co-operation
  - **Set the next policy standard**

# Thank you

---
